

# Say Bye-Bye To Bed Bugs.

## AUTOMATED INSECT MONITORING

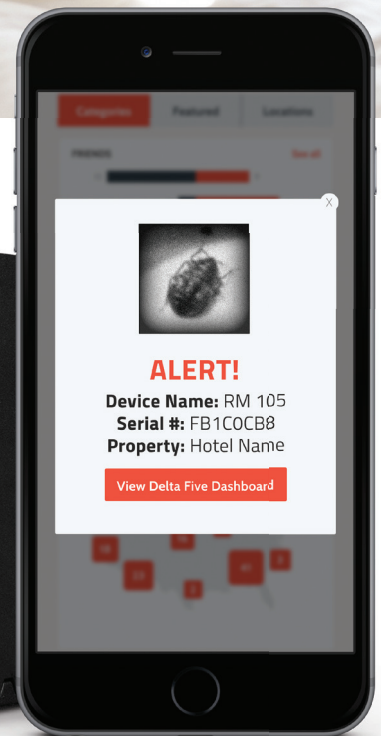

Meet the Automated Insect Monitoring device from Delta Five, a 24/7, WiFi enabled monitoring system for bed bugs and other insects.

Now instantly detect when bed bugs and insects arrive with 24/7 monitoring, email notification and text alert options. This hyper-targeted approach is proven to have a success rate of **over 90%**, allowing you to share critical information with your pest control company for quick eradication.

The compact Automated Insect Monitoring device discreetly attaches to the wall behind the bed and instantly alerts you to the presence of a bed bug. The all-natural, odorless lure is specially designed to attract bed bugs and other insects nearby. The cameras located in the device are triggered at the presence of a bug - with an image of the pest immediately emailed to the property for further action.

After all, it's not a matter of if someone will bring a bed bug onto your property, it's when. Aim to keep your property insect free.

## DISCREET 24/7 MONITORING FOR PESTS INCLUDING:

- ▶ BED BUGS
- ▶ BEETLES
- ▶ WEEVILS
- ▶ SILVER FISH
- ▶ EARWIGS
- ▶ ANTS
- ▶ SPIDERS
- ▶ ROACHES

# Live Monitoring Helps Prevent Problems Before They Happen

AT LESS THAN THE COST OF ONE INSPECTION,  
YOU CAN HAVE CONSTANT MONITORING FOR YEARS!

Prevention is key. The beauty of the Automated Insect Monitoring device is that it alerts you to the infestation of insects, such as bed bugs, so that you can perform targeted room treatment BEFORE you have a problem. As research shows, **70% of guests will leave after finding bed bugs** – and many will post to social media upon discovering the presence of bed bugs in their room.

**over 90%**  
effective at alerting to  
presence of bugs before  
a guest is impacted

**250%**  
more reliable than  
visual inspection

## HOW THE AUTOMATED INSECT MONITORING DEVICE WORKS

The device connects to a property's existing WiFi network and includes a software dashboard that provides a history of all occurrences. When a pest enters one of two chambers on the device, a low resolution image is taken and emailed to the property for further action.

With its all natural lure and behind the bed location, the device is odorless and discreet – so guests are not alerted to the potential for pest problems. The Automated Insect Monitoring device is positioned and placed in a way that will not interfere with guests or housekeeping activities.
