Sustainability Cloud

You know software can help you achieve your sustainability goals. But you're struggling to find the right solution. Quite often, a promising solution turns out to be too complex, too expensive or simply takes forever to get up and running. But you can't afford to wait. You need a solution now that'll help

you understand your baseline, align reporting with common standards and set KPIs that are meaningful to your organization, while improving the efficiency and accuracy of data collection. Cority is here to help you quickly get started with the essentials.

cority

Cority Sustainability Performance Essentials

sustainability
cloud

Helps organizations manage and measure initiatives, aggregate data across the enterprise, track progress toward goals, improve sustainability outcomes and create transparent, accurate reports for internal and external stakeholders.

Key Features

- › Easy reporting
- › Quick setup
- › Enterprise scale
- › Data accuracy
- › Collaborative interface
- › Third-party auditability

Standardize and Simplify

Tracking and reporting on sustainability performance can be a daunting task. Cority makes it easy to standardize the data collection process and simplify the reporting process with integrated business intelligence and built-in standards. Easily consolidate data to gain insights across the enterprise, or see data for an individual location, business unit or department. Enter data once and apply it to multiple reports.

Gain a 360° View

Cority's sustainability performance solution provides you with the ability to easily create, collect and report on qualitative and quantitative metrics for internal and external sustainability reporting. Start by collecting indicators required by CDP, GRI and/or SASB that are relevant for your industry as your starting point and grow your KPI library over time. Consolidate and track your data with intuitive built-in dashboards and create an informed sustainability strategy for your organization.

Improve outcomes

Measure sustainability outcomes across the enterprise, identify areas for improvement and prioritize projects with robust analytics that enable a data-driven approach. Manage your sustainability performance holistically, from your climate initiatives, carbon reduction measures and environmental programs to your socially oriented as well as economically relevant measures to improve sustainability performance in a verifiable way.

Manage carbon

Integrated CO₂ management features calculate, collect, manage and report reliably on your relevant climate data including scope 1, 2 and 3 greenhouse gas emissions and your overall corporate carbon footprint. The solution offers common out of the box emission factors including DEFRA and AP-42 with the ability to add on an emission factor library integration with a third-party provider such as ecoinvent.

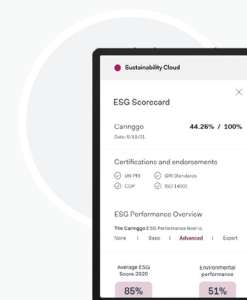

Align with key standards

Minimize the time it takes to get started by aligning your sustainability program with common built-in standards, including GRI, CDP and SASB. Utilize preconfigured mapping to enter data once and report in multiple framework formats, minimizing redundant effort and room for error. Run comprehensive, automated evaluations and analyses on your aggregated sustainability data to prepare internal and external reports.

Software that grows with you

Cority's best-in-class software solutions are designed to meet your immediate needs while scaling as your business grows and adapting as sustainability requirements shift. Our Sustainability Performance Essentials package helps your business get its sustainability program on a solid footing and provides opportunities to add on additional features based on your timing and needs.
