

Leading Fine Chemicals & Biochemicals Supplier Injects Over 70,000 Products Into the Labscoop eCommerce Engine

Molekula strives to bring chemicals on-demand to R&D scientists and engineers by offering 24-48hr fulfillment for growing number of over 6,000 chemicals.

Little Rock, Arkansas (September 16, 2015) — Molekula a leading supplier of fine chemicals and biochemicals stands at the forefront of their constantly changing industry. Molekula distributes/manufactures over 70,000 chemicals worldwide and holds stock of over 6,000 at its warehouse locations in both Europe and the United States. This allows for nationwide delivery of 24-48 hours for all stock items. Molekula was founded in 1999 and has grown rapidly since then to become a major player in the industry. They now occupy four sites worldwide and have plans to expand again in the near future. Its head office is located in Newcastle Upon Tyne, UK with sales sites in Shanghai, China - Munich, Germany and Irvine, California. "We are very proud to be part of this collaboration with Labscoop and feel it is a very good way for both brands to extend their reach further into the research and development market. Molekula is looking forward to building a strong relationship with Labscoop over many years." Calvin Banks, President

About Molekula:

Molekula Group, LLC is the American division of the international Molekula brand that was founded very recently in 2013. The idea was to take the knowledge and expertise of chemical sourcing that have been gathered over many years and bring it to the world's largest market. Molekula is an International Chemical Company with offices across all time zones. Headquartered in Newcastle upon Tyne, UK with two satellite sales and distribution sites in Irvine, California and Shanghai, China.

About Labscoop:

[Labscoop](#) was founded in early January 2014, set on a path that will fundamentally change the way scientists shop for lab reagents, consumables, and equipment. Our company strives to create an [amazing user experience](#) for scientists with in-depth product peer reviews, comprehensive product specifications and associated data files that will allows scientists to quickly and easily search, compare and order products thus simplifying the lab procurement process.
