

# BE ON THE ALERT. FOR EVERYTHING.

**Guardly** provides a next generation mobile alerting platform for accurate, accountable and secure communications between enterprise operations and security command centers and field personnel with smart-phones and tablets. The Guardly platform provides real-time situational awareness with location-aware, customizable, voice and geofence alerts -- as well as an advanced Indoor Positioning System (IPS) that pinpoints problem areas and people indoors.

**GuardlyCommand™** is browser-based and manages inbound and outbound alerts, allowing security and operations to locate and communicate with users anywhere in the world.

**GuardlyMobile** delivers end-to-end mobile alerting and communications for users and is compatible with Android and Apple iOS devices.

**GuardlyIPS** is an Indoor Positioning System that uses Bluetooth Low Energy (BLE) beacons in to pinpoint people and problems areas on any floor or office in any multi-story building using a patented indoor positioning framework.

**GuardlyAPI** integrates with other systems to provide location-based authentication for legacy alerts and tickets.
