

Fixed Wireless

In today's demanding business environment and expected "always on communications", ensuring that your employees, customers and partners have reliable access to the Internet is essential to stay competitive. If your business needs an alternate solution to terrestrial network access methods (i.e. Fiber or Ethernet over Copper) with fast turn-up and affordable monthly service rates, Transbeam's Fixed Wireless service is your solution.

Transbeam's Fixed Wireless provides an alternative broadband access solution to terrestrial network access technologies that accomplishes high bandwidth needs, up to 1 Gigabit per second, with quick turn-up times and no hassles of typical broadband installation processes. This technology is highly reliable and uses a high capacity microwave technology end-to-end that offers 99.99% uptime guarantee with symmetrical speeds.

This solution is ideal for the following scenarios:

- ▶ Small- to medium-sized businesses that need an affordable broadband solution
- ▶ A business that is in between office moves with a temporary office location
- ▶ For events, conferences and outside venues
- ▶ To use as a backup Internet solution to support your business continuity plan

Fixed Wireless Features

- ▶ A quick Internet solution with fast turn-up
- ▶ Scalable solution - if you sign up for one speed and find over time you need more bandwidth, we can upgrade your speed at any time
- ▶ Used for primary Internet access or can be used as an alternative backup solution
- ▶ Bandwidth speeds available from 20 Megabit per second to 1 Gigabit per second
- ▶ Secure, interference-free wireless connectivity over FCC-Licensed spectrum
- ▶ Coverage for Fixed Wireless is initially in the New York Metro Area (additional markets coming soon)
