

A Patient-Centered Secure Mobile Communication Platform

CareTrail, developed by VisionIT and Henry Ford Health System, is a clinical communication and collaboration application that combines messaging, on-call scheduling, and task management for clinicians in support of improving patient care.

The platform interfaces with major Electronic Health Record (EHR) applications and is accessible through any mobile device.

CareTrail is an advanced mobile application, with features designed by clinicians, for clinicians.

Who benefits?

CareTrail was designed for hospital systems, clinician groups, homecare, and all clinicians.

Care Team Management Solution

- Messaging
- Dynamic Care Teams
- On-call Scheduling
- Alerts
- EMR Interfaces
- HL7 Feeds

Task Assignment and Tracking

- Patient-centric Tasks
- Task Life Cycle Management
