Cash-to-Core Automation

with DynaCore

DYNACORE™

Powered by DynaCash™, DynaCore is the next evolution of the leading Teller Cash Recycler (TCR) software.

Multiple User Control

With multiple user control and transaction booking, as many as six users can be assigned to one TCR while avoiding overlapped transactions.

Simple to use interface

No need to toggle through multiple platforms to fulfill different transactions. With DynaCore you can perform

- Manual transactions
- Buy/sell vault transactions
- Offline verifications
- Inventory management
- Auditing of transaction totals

Adds Value

Interfaces the TCR and Bill Discriminator to work cohesively together so that you can gain the full value from the hardware you've invested in. The Coin Sorter, Coin Dispenser, and/or Journal Printer are also supported with the DynaCore controller.

Cash to Core Automation — An Innovation of Necessity

DynaCore works alongside the Universal Banking model to ensure comprehensive financial services for a client are managed by a single banker. That means no more handing off of the client to other bank personnel when completing a transaction interaction — keeping the client and staff safe from multiple cross contact exposure.
