Nulixir Earns NSF's Good Manufacturing Practice Registration

Independent registration from the global public health organization demonstrates a commitment to dietary supplement quality and compliance with U.S. GMP requirements

Austin, TX – March 16, 2023 – Nulixir Inc. manufacturing facility in Austin, TX was recently added to NSF International's dietary supplements Good Manufacturing Practice (GMP) registration. Earning GMP registration from [NSF](#) verifies that a manufacturing facility has the proper methods, equipment, facilities, and controls in place to produce dietary supplement products.

Nulixir is a business-to-business (B2B) that utilizes a patented and proprietary Smart Delivery technology to unlock new realms of functionality in food, beverage, and dietary supplements. Nulixir offers differentiated solutions that deliver best-in-class taste, shelf life, and bioavailability across growing product applications like beverages and gummies.

Ehsan Moaseri, Founder and CEO states, "Earning our NSF certification for Good Manufacturing Practice (GMP) is a critical step in our journey to becoming the industry leader in functional ingredients. This is a great achievement by the team."

The NSF GMPs were developed in accordance with the U.S. Food and Drug Administration's (FDA) 21 CFR part 111 regulation on dietary supplement manufacturing, packaging, and distribution. Utilizing GMP guidelines assists companies in developing and maintaining proper controls in their manufacturing process so that products are processed, manufactured and labeled in a consistent manner, and meet quality standards.

"The GMP mark indicates that an NSF auditor has entered a facility, checked documents and deemed the facility compliant with GMP regulations for production," said David Trosin, Managing Director, Global Health Sciences Certification at NSF. "We're very pleased to grant NSF GMP registration to this Nulixir manufacturing facility."
