

The ultimate portal from physical to digital art worlds

Sublimart Manifesto

Portals between the physical and digital worlds must preserve the essence and uniqueness of the artworks that traverse them. If a physical piece of art is merely digitized and not destroyed, both copies exist concurrently, thereby keeping the portal open.

Sublimart has conceived an innovative and non-violent solution to this dilemma through a ritual process. In this process, the artist, artwork, and technology converge in an irreversible act of metamorphosis, ensuring the digital copy becomes the only instance of the artwork's existence.

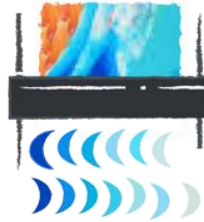

With this, the **Sublimart movement is born**, paving a path for artists to embrace the digital revolution. **This transports us into a new era, in which the constraints of the physical world are bounded only by the artist's imagination.**

The Ritual

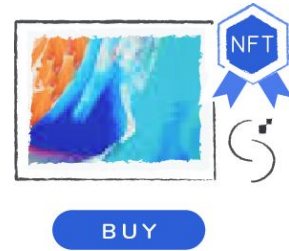

The Sublimart device transfers real-world pieces of art into the digital world. Artists can immortalize their art on the blockchain while the original is destroyed in the physical world, thereby keeping the uniqueness of their work.

5D scan capture as HDR image. Using special illumination we ensure **textures, transparency and details** are mapped.

Original artwork is laser-cut according to a hash cut map. An **expert certifies** all the procedures.

We mint the HR images as NFT, embedding **Sublimart certification** in metadata, and acquiring its unique address.

VR + AR Experience

VR and **blockchain technology** offer the possibility to enjoy digital art in new and unique ways, with **VR devices** acting as a medium that **re-opens the portal between physical and virtual worlds**.

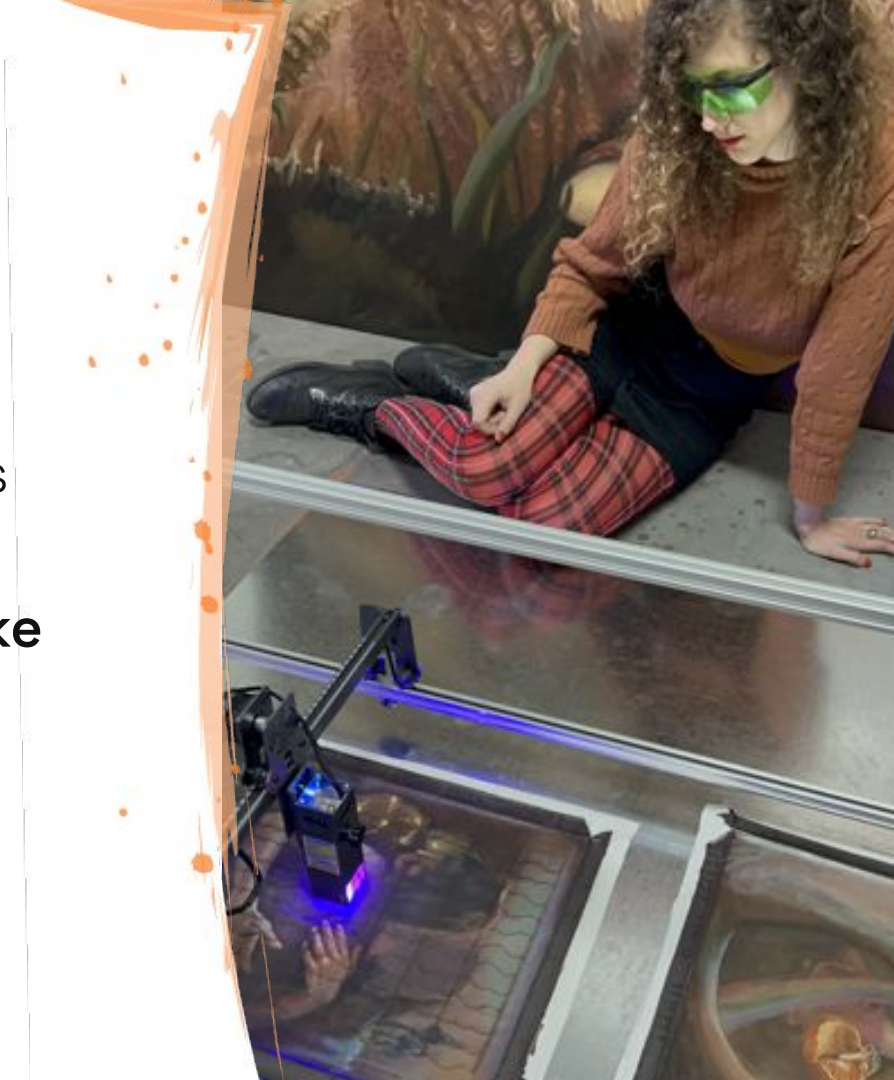

The **NFTs** of the sublimated pieces of art can be exhibited in a **virtual gallery** for a **full-immersive experience**.

Sublimation + Mint

Artists have ripped, burnt, torn and cut their artwork countless times.

They still can, **but they can make their art live forever on the blockchain.**

Artists selection

All artists who want to be part of the **Sublimart Collection** go through a **careful curation process** in order to assure **diversity** of both **styles and techniques**.

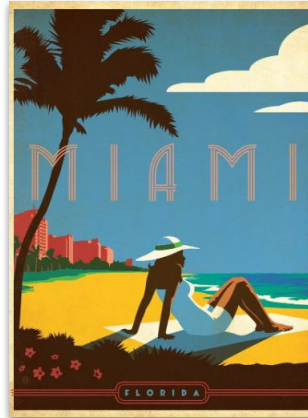

Among the 40+ pieces that have been sublimated to date, there are pop, classic, and abstract artworks.

Milestones & Roadmap

Sublimart Machine

The Sublimart device in action passing real value from the physic to the digital world.

- **Camera Head 5D**
 - a) HDR Camera
 - b) 48x RGB illumination rig
 - c) 8x UV rig
- **Cutting Head**
 - a) 2x laser diodes
- **XY Axis setup**
- **Control unit**

Team

Ariel Futoransky

Ariel is a security and crypto specialist. He has founded several companies related both to security and crypto ecosystems.

Among them **Core Security** (acquired by K1), and **BitTrap** of which he is the CTO.

Sebastian Wain

Sebastián co-founded **CoinFabrik** in 2014 and **Nektra Advanced Computing** in 2003. CoinFabrik develops **secure blockchain and crypto solutions** and Nektra specializes in Microsoft Windows internals, reverse engineering and custom security solutions.

Natalia Jana

Natalia is a **multidisciplinary professional.** She studied dentistry at the University of Buenos Aires, and also studied arts in the multidisciplinary art center in Mar del Plata, Argentina. **Natalia loves to contribute to innovative projects in art and science.**
