100% FOCUS ON ENTERPRISE ACUTE CARE

Larger hospitals and healthcare networks are faced with an enormous management challenge to improve efficiencies and reduce costs while providing exceptional patient care. Vizzia's innovative RTLS solutions help healthcare executives and clinicians to manage these growing challenges.

ASSET MANAGEMENT

Tracking and management of medical equipment enables staff to find available assets, recover missing equipment, reduce dependency on rentals, and perform maintenance efficiently.

ENVIRONMENTAL MONITORING

RTLS and IoT sensors can remotely monitor temperature, humidity and air quality to protect patients, critical medications, lab samples and blood banks to ensure optimal patient safety and care.

WAYFINDING/ PATIENT EXPERIENCE

IoT-enabled solutions simplify navigation within healthcare facilities, helping patients and visitors find their way efficiently using interactive mapping to guide individuals to their desired destinations.

HAND HYGIENE COMPLIANCE

Maintaining proper hand hygiene is crucial to reduce infection risks within healthcare facilities. Vizzia offers solutions capable of detecting staff members' handwashing or sanitizer usage.

STAFF LOCATING/DURESS

For staff workflow, RTLS can automate nurse call cancellation, rounding schedules, and help summon urgent assistance to support patient care. In emergency situations, duress systems provide vital rapid location tracking and alerting.

PATIENT SAFETY/WORKFLOW

RTLS can optimize patient workflow management and enhance patient safety. Healthcare providers can monitor patient movement, prevent wandering, and enhance infant security within the facility.
