Passport is a comprehensive user database that saves developers months of time and resources by providing 30+ features in just days.

Login / Registration

Allow users to log in and register for any and all of your applications.

On-Premise Security

Don't put your most valuable asset in a shared environment. Secure your users on your own hardware.

SSO

Passport has a skinnable OAuth 2.0 front end to provide SSO for all applications.

User Reporting & Analytics

Passport comes standard with numerous user reports. See how people are using your applications.

Additional Features Include

- Email Verification
- Reset Passwords
- Email Templates
- Application Data
- User Search
- Role-Based Permissions
- Two-Factor Authentication
- Password Constraints
- Registration/Login Reports
- Daily Active User Reports
- Monthly Active User Reports
- Commenting
- Bulk User Importing
- Audit Logs
- CleanSpeak Integration

Localization

Capture each user's preferred language on the registration form. Passport will localize emails and messages to that user.

Built for Desktop & Mobile

Passport's API and interface is built for mobile and desktop devices.
