

BUCKLE UP FOR BONE HEALTH

FDA grants clearance for Osteoboost™, the first device-based prescription treatment for postmenopausal women with osteopenia.

WHAT IS OSTEOBOOST?

Osteoboost is a belt, worn around the waist, that directly stimulates bone growth and preserves bone mineral density and strength by sending low-frequency vibrations directly to the lumbar spine and hips.

OSTEOBOOST IS PROVEN TO SIGNIFICANTLY SLOW THE LOSS OF BONE STRENGTH

Clinical Trial Results:
Loss of Vertebral Strength

Change in vertebral strength measured by CT scan. The Active Treatment group (min. 3x per week) lost, on average, 0.48% bone strength. The Placebo group lost 2.84%, with a relative difference of 2.36% (P=0.014).

PLUS, CT MEASUREMENT OF VERTEBRAL BONE DENSITY SHOWED A 1.68% RELATIVE BENEFIT FOR PATIENTS USING THE OSTEOBOOST (P=0.008)

VERY HIGH COMPLIANCE

83%

of trial participants stayed with the program!

OSTEOBOOST BENEFITS...

COMFORTABLE

EASY-TO-USE

EFFECTIVE

NO MEDS

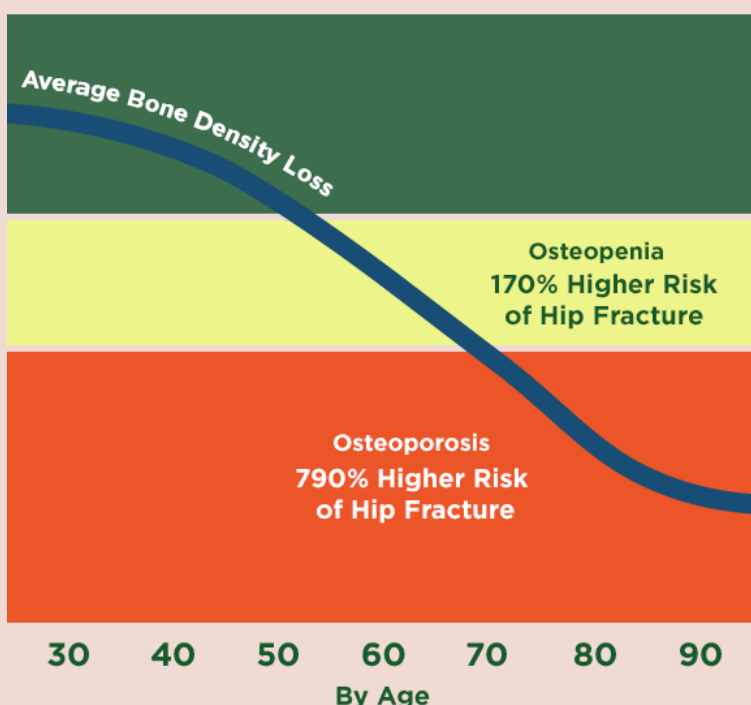

NO SERIOUS ADVERSE EVENTS

~52 MILLION AMERICANS HAVE OSTEOPENIA

Osteoboost's breakthrough, NASA-inspired technology will help a growing generation of seniors prevent fractures and protect mobility.

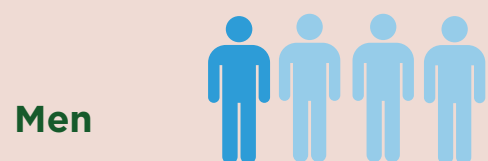

BONE DENSITY LOSS IN WOMEN

FRACTURE RISKS

Women

Men

1 in 2 women and 1 in 4 men over 50 will suffer a bone density related fracture.
