NAVER CLOUD PLATFORM

What is FilingBox MEGA?

FilingBox MEGA is secure server storage for Linux and Windows servers. It has an application detection module and provides a network drive for servers. MEGA examines applications requesting data and provides a fake file with read-only for all applications except preregistered applications. So it prevents ransomware and data breach malware attacks.

Server

Unregistered Program
Registered Program

Fake File with Read-Only
Real File with Read-Write

FilingBox MEGA

The US and International Patent Pending and Registered

What is the Storage Protection Technology?

Storage protection technology protects data in a network drive against ransomware and data breach malware attacks. As network protection and endpoint protection technology have a detection module on both the network and endpoint device, we added a detection module to the storage, which allows only preregistered applications to read, modify, and delete data but others don't. It works together with existing network protection and endpoint protection technologies. (As listed NWIP by International standard organization, ITU-T)

FilingBox MEGA Features

Special storage is designed for the data protection and security of servers

Cloud Service or License

FilingBox MEGA is provided as a cloud service or License. You choose.

Application Dedicated Storage

FilingBox MEGA allows only pre-registered applications to create, read, modify, and delete data.

Data Breach Prevention

FilingBox MEGA always provides a fake file with read-only for unregistered applications.

Read Only Storage

FilingBox MEGA allows pre-registered applications only to read data except to create, modify, and delete data.

Secure Application Registration

FilingBox MEGA requires an OTP code for registering a new application.

Easy Management

FililingBox MEGA provides a web admin panel for easy management and configuration.

FilingBox MEGA Use Cases

FilingBox MEGA works well in Linux and Windows server environment.
Protect your server data using FilingBox MEGA if you want to protect data in a server.
