WEBB-RITE SAFETY DEVELOPS INNOVATIVE AND PORTABLE FALL PROTECTION SYSTEM

[Port Allen, LA] Webb-Rite Safety announces it has developed an innovative and portable **Safety Lifeline System** fall protection solution specifically designed for industrial, commercial, and residential construction applications. The precision engineering and design of the system has received **Professional Engineer Certification** for both vertical and lateral loading and provides exceptional worker safety and mobility at heights that require fall protection.

Don Miller, President & CEO of Webb-Rite Safety states, "The Safety Lifeline System has been in the design, engineering, and testing stages for over a year to ensure we meet or exceed both industry regulations and customer needs. It is simple to use due to its lightweight, durable, and portable design, and operates in just about any construction environment where worker heights require fall protection."

The Safety Lifeline System is one of the most advanced fall protection solutions on the market that can increase worker safety, mobility, and productivity. The system is manufactured with aluminum and steel providing a durable yet lightweight system that can easily be installed, uninstalled, moved, and reinstalled on a job site within minutes. The tie-off point is positioned above the worker eliminating the need for anchor plates, ropes and straps, thus reducing trip hazards associated with current fall protection practices.

Contact Webb-Rite Safety at (225) 383-3903 or email ed@webbritesafety.com for more information on this breakthrough fall protection Safety Lifeline System.

About Webb-Rite Safety, Inc.

Webb-Rite Safety is an industry leading manufacturer of advanced fall protection equipment and engineered systems.
